

CYBERDYME

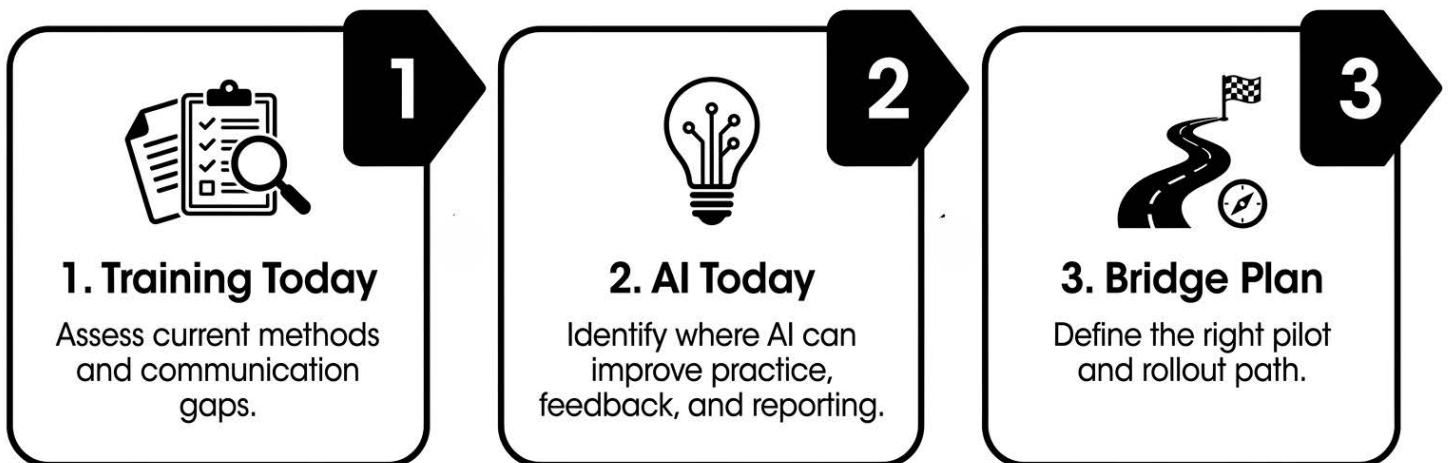

# CyberDyme: AI Training Readiness Assessment

**CEOs are asking:  
“What is your plan for AI in workforce training?”**

CyberDyme is a Personal AI Coach for corporate training. Employees practice real workplace conversations out loud and receive instant feedback on facial expressions, body language, pronunciation, and other observable communication signals.

## Why this Assessment Exists

Many leaders are being asked to think about AI in training before they have a clear internal answer. This assessment helps clarify where AI fits, where it may help most, and how to move forward with confidence.

## Key Questions

- Where is communication training falling short today?
- How is communication improvement measured today?
- Where can AI strengthen the current training model?

## Deliverable

A practical plan outlining:

- your current state
- where AI may help most
- next-step recommendations
